ROUND 2 GUIDELINES — Final Submission

Build on your Round 1 submission and keep the same track and segment. If you have refined or changed your solution, feel free to share what changed and why.

Deliverables

- A 15-slide deck or 5-page report, excluding the cover and annexures. Open with a one-slide executive summary.
- Optional annexures: prototypes (Figma or mockups are fine), videos, extra VOCs.
- File names: `TeamName_R2.pdf` and `TeamName_R2_Annexure.xlsx`

1. Solution Validation
Test your solution with at least 20 target users through concept tests, prototype walkthroughs or a small real-world trial. Report what users did or committed to, not only what they said they liked. State your method, how many people you tested, sources for any secondary data, and the limits of your evidence.

2. Design & Feasibility
Show the user journey before and after your solution. Say which Paytm features it uses, what must be built new, any regulatory or partner dependencies, and a rough build effort (small / medium / large).

3. GTM & 90-Day Pilot
Cover the target segment, channels, partners and messaging. Then set out the pilot: which cohort, a control group, baseline, targets, what result means scale up or stop, and how you would scale afterwards.

4. Business Impact

- The main metric is the increase in Paytm's share of UPI GMV for your segment. Include early indicators (activation, repeat use).
- Show the size of the opportunity, cost per extra active user and per ₹ of extra GMV, and whether usage holds once incentives stop. Solutions that depend on cashback will score lower.
- Include a sensitivity check on your 2–3 most important assumptions, key risks (including how competitors might respond) and how you'd reduce them.
